New vacuum sweeper Hako-Jonas 1900

For very heavy-duty applications

At the CMS 2007 (18th – 21st September, Berlin) Hako will be presenting the Hako Jonas 1900, the new high performance vacuum sweeper with diesel or LPG drive for heavy-duty, large area applications e.g. in industry, logistics or multi-storey car parks.

Hako-Jonas 1900

With an area performance of approx. 25.000 m²/h the Jonas 1900 is the most powerful, efficient vacuum sweeper that Hako has ever had in its product range.

The Hako Jonas 1900 removes heavy debris in large quantities at a working speed of up to 13 km/h. As a result of the powerful hydraulic drive even steep gradients can be overcome without problem.

The high sweeping performance is not only the result of an impressive working width of 1,930 mm (with 2 side brushes), but can also be put down to the generously dimensioned dirt hopper with a volume of 780 litres.

At the same time the unique RTR-System (Rotary Trash Relocation) ensures the highest possible degree of filling. By tipping the hopper the dirt, which has been swept up, is transported to the rear, so that space is created at the front again for more swept debris. The hopper is emptied via high dump up to 162 cm. Two cassette filters (total filter area 11 m², degree of separation > 99 %) each with a shaker motor, ensure that the level of cleanliness of the used air is very high. The filters are accessible without the need for tools and are washable.

Further characteristics of the service-friendliness: main broom can be changed and main broom and side brushes can be adjusted without the need for tools; the complete drive unit can be swivelled out of the bodywork for maintenance purposes.

The Hako Jonas 1900 has been designed for a long machine life: a solid steel framework forms the basis of the machine, the side brushes are protected against collisions.

The large wheels protect vehicle and operator against impacts, bumps and vibration; they master even unevenness without any problem.

The operator sits high up, with an excellent view of the area to be cleaned; the instruments and operating elements are in direct view and reach; with only one button – the “green Hako button” – all necessary functions required for sweeping can be switched on at once.
