

Example: With Hako you save water and detergent.

Hako offers you made-to-measure dosage and filling systems, speed-dependent control of the amount of water and, in addition, the TÜV tested and approved Hako Aqua Control System.

This enables you to eliminate inaccurate dosage completely, prevent too much water being used and save up to 50 % water and detergent when cleaning surfaces.

A built-in memory function allows all operational values to be activated at the press of just one button and by the simple press of a finger.

This is how Hako creates concrete improvements for the environment and ensures that these can be used without any problems, anywhere, at any time.

Example: With Hako you
save water and detergent.

Example: With Hako you save water and detergent.

Test Certificate

Hako-Werke GmbH

Hako-AquaForce-System

cleaning with demineralized water

Summary of test results

- severely reduced detergent consumption
 - cost-saving
 - valuable contribution to environmental protection
- detergent free cleaning possible in many cases
 - very good cleaning effect when water soluble dirt
 - ecological
 - no favoritism of dirt reappearance
 - residue free drying, therefore also very suitable for high gloss surfaces
 - no dosage problem
 - no bothersome foam formation
 - no disposal problem of waste water
- no graduate buildup of limescale and lime soaps
