THE HAKO B30 - SMALL BUT PERFECTLY FORMED

Hako Machines continues to expand its range with the introduction of the new Hakomatic B30, a high specification scrubber dryer for the quick and simple cleaning of smaller and medium-sized areas. The B30 is ideal for use in retail environments such as smaller supermarkets, large chemist stores, convenience stores and car showrooms

The B30 has all the advantages of the much bigger Hako machines in this scrubber dryer family which includes 17 inch to 33 inch scrubber dryers but in a smaller package that offers great value for money, especially in terms of life cycle costs. Far superior in quality to its competition, the B30 offers excellent productivity and has been designed to benefit the requirements of the end-user.

A highly manoeuvrable and compact machine, the B30 can clean small retail formats from 100m² increasing right up to 600m² with ease, and whilst it's not as big overall as other machines in the series, the tank size has been significantly increased up to 30 litres, giving a third more capacity when working. However the inclusion of the innovative Hako Aqua Control System means that the B30 uses considerably less water and cleaning agent while increasing its working time.

A large clean water filling area has been developed for fast-fill systems or filling with a bucket while a clean water filling level indicator clearly shows how much fluid remains in the tank. Equally fast is the fantastic drying performance of the machine with a newly designed squeegee that can be changed without tools, reducing machine downtime for maintenance.

The optimised handle position is ideal for relaxed and fatigue-free working and offers a clear view of the working area, with an easy to use control panel. There is an optional connection for a useful hand-tool that can reach normally inaccessible areas.

Its onboard maintenance-free battery guarantees long running times of up to 100 minutes and the on-board battery charger conveniently fits any plug socket. Its compact size also allows the machine to be stored much easier in stock cupboards or restricted areas.

Hako UK is part of the Hako Group, one of the leading manufacturers, worldwide, of technology for indoor and outdoor cleaning and grounds maintenance. The company has factories throughout Europe. For more information on Hako and its range of machines, visit www.hako.co.uk.
